DETAILED ACTION

The following is a first action on the merits of application serial no. 10/612,485 filed July 02, 2003.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-18 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Paielli et al (6,131,552). Paielli et al. discloses A gaseous fuel pressure regulating system (16), comprising; an inlet port; a conduit connected in fluid communication with said inlet port (15,334); an outlet port (17,336) connected in fluid communication with said conduit; an actuator (344) ; a first valve (354) disposed between said conduit and

said outlet port, said first valve being operable to selectively inhibit or permit gaseous fuel to flow from said conduit to said outlet port said first valve being movable between a gaseous fuel flow inhibiting position and a gaseous fuel flow permitting position in response to movement of said actuator; and a controller (30) connected in signal communication with said actuator, said controller being configured to maintain a desired pressure magnitude at said outlet port.

Regarding claims 3, 12 and 18, a pulse width modulated signal. See column 9, lines 52-55.

Regarding claims 4, 13 and 19, a pressure sensor. See column 5, lines 2-12.
